

DEPARTMENT OF ECONOMICS

**BHARATI COLLEGE,
UNIVERSITY OF DELHI**

9th MAY 2025

Vision

- Analyze economic systems and policies of global economies
- Excellence in teaching and research
- Foster critical thinking and practical application of economic theories
- Cultivate culture of research excellence
- Prepare students for successful careers
- Engage in scholarly activities to supplement student's knowledge
- Engage in community outreach activities

Pre-Class Notes for Students

1. Methods of Primary Data Collection

Primary data refers to firsthand data collected for a specific research purpose. Key methods include:

- **Observation:** Watching participants in a natural setting without direct interaction. Can be participant or non-participant observation.
- **Interviews:** Direct verbal interaction between researcher and respondent, classified into structured, semi-structured, and unstructured interviews.
- **Questionnaires:** A structured set of questions distributed in written form. Can be online or offline.
- **Surveys:** Broader method involving structured data collection from a large number of respondents using questionnaires or interviews.
- **Focus Group Discussions (FGD):** Small group discussions led by a moderator to gather qualitative insights.

Problem-Based Learning

Ques 7) supply shocks and wage flexibility

a) given $M = 0.03, \gamma = 0.03$

Natural rate of unemployment

$$Unr = M + \gamma$$

If $\alpha = 1$

$$Unr = 0.06$$

$$= 0.06 = 6\%$$

If $\alpha = 2$

$$Unr = 0.03$$

$$= 0.03 = 3\%$$

Thus, higher wage flexibility (α) \rightarrow lower natural unemployment.

(b) if M increases to 0.06

with $\alpha = 1$:

$$Unr = 0.06 + 0.03 = 0.09$$

$$= 9\%$$

With $\alpha = 2$

$$Unr = 0.06 + 0.03 \rightarrow 0.045 = 4.5\%$$

Thus, increasing wage flexibility reduces the adverse effects of oil price shocks.

Princy Jain posted a new question: Mankiw Chapter 5 Questions

Hints for questions

- Q1. a. availability of close substitutes
- b. narrow vs. broad market
- c. short run vs long run
- d. necessity vs. luxury

Q2. use the information on Q and P from table to calculate elasticity

Q3. Calculate %change in P. Then use Elasticity formulae to find out % change in Q

Q4. $TR = P \times Q$

so, %change in TR = % change in P + % change in Q

$$\Rightarrow +15\% = \%P + (-30\%)$$

$$\Rightarrow \%change\ in\ P = 45\%$$

$$E = \%changeQ / \%changeP = -30/45 = -2/3$$

Q5. draw diagrams for all three special cases. Billy and Valerie's explanation could be right.

Q6. similar to Q2

Q7. Income increase, Qd decrease as Income elasticity is negative
decrease in P_y , decrease in Qd, cross price elasticity is positive
and decrease unambiguously

Role Play & Story Telling

Essential of
 Economics (GE 1
 SEM)

Here's a fun, lighthearted story that applies basic economics concepts, like supply and demand, scarcity, opportunity cost, and competition. The Tale of Lily's Lemonade Stand Once upon a time in the small town of Sunnyville, there lived a bright young girl named Lily. Summer was in full swing, and the scorching heat had everyone craving something cold. That's when Lily got a brilliant idea: start a lemonade stand. She set up her stand at the end of her driveway with a big sign that said, "Lily's Lemonade: \$1 a Cup!" The first day, business was booming. Her friends, neighbors, and even passersby all lined up to grab a refreshing drink. By the end of the day, Lily had made \$20. She felt like a business genius! But the next morning, she noticed something strange. Her friend Max had set up his own lemonade stand across the street, selling lemonade for 75 cents a cup. Uh-oh! Competition was heating up. Lily thought to herself, "What should I do? If I keep my price at \$1, people will go to Max. But if I lower my price, I won't make as much money per cup!" After some thinking, she decided to offer a special deal: Buy one lemonade for \$1, and get a cookie for just 50 cents more. People loved the combo, and business picked up again! A few days later, a heatwave hit Sunnyville. People were demanding lemonade more than ever. Both Lily and Max had long lines of thirsty customers. But there was a problem - lemons were hard to come by because of the high demand and limited supply at the grocery store. The price of lemons shot up, and both Lily and Max were forced to raise their prices to \$1.50 per cup to cover their costs. This time, Lily had an idea. She thought, "Why compete over price alone? What if I made a premium lemonade, using special honey and fresh mint?" She introduced a luxury lemonade for \$2.50 a cup. Surprisingly, a lot of people were willing to pay extra for the premium version, while others still bought Max's regular lemonade. At the end of the summer, Lily and Max looked back at their lemonade businesses. They had both learned important lessons about supply and demand, price competition, scarcity, and product differentiation. In

A WORKSHOP ON MICROECONOMICS: REAL LIFE CASE STUDIES AND APPLICATION BASED LEARNING

Under the Aegis of IQAC

23RD OCTOBER 2024 | 11 AM

AUDITORIUM

Case Study: "Empowering Communities in Rural India"

In a rural village in India, a non-governmental organization (NGO) is implementing a development program aimed at improving the well-being of the community. The program focuses on providing access to basic healthcare, education, clean water, and sanitation. Additionally, the NGO is working to enhance the economic opportunities available to the villagers by offering microfinance options and skill development training.

What is the primary focus of Amartya Sen's capability approach to development?

1 point

- ☐ Expanding individual freedoms and opportunities
- ☐ Maximizing income and wealth
- ☐ Increasing government intervention in the economy
- ☐ Promoting industrialization and urbanization

**Case-
Based
Learning**

Principles of
Microeconomics-I
(GE 3 SEM)

Riddle 1: I'd pay a bit more, but got a sweet deal, I saved some rupees, oh what a steal! I wanted to pay fifty, but it cost only thirty, What's this extra savings that's making me flirty? Riddle 2: I sold it for twenty, but it cost me ten, That extra I earned — I'm happy again! It's profit I keep for each thing I make, What do we call this bit I take? Riddle 3: A product I want, it's flying too high, The government steps in, so the price will comply. They cap the cost, make it low, make it nice, What's this control on the product's price? Riddle 4: There's a gap in the market, not all is right, Both buyers and sellers lose in this fight. When prices don't fit and trade starts to toss, What do we call this frustrating loss? Riddle 5: When both buyer and seller are happy and fair, They share in the value and balance the share. What's the term that makes them both glad? It's the whole of the gains they both had!

INTRODUCTORY
DEVELOPMENT
ECONOMICS (5
SEM) MINOR

Development Economics Puzzles Puzzle 1: "I represent the gap between what people need to survive and what they actually earn. I show the average shortfall in a population. Without me, you wouldn't know how far behind the poorest people are. What am I?" Puzzle 2: "I am a curve that doesn't want to be straight. I show how much of a country's wealth is shared. If I bend too much, it's a sign that only a few people are getting rich. But if I stay close to a straight line, it means everyone shares wealth equally. What am I?" Puzzle 3: "When a country is young and poor, I start to rise, making inequality soar. But as the nation grows older and wealthier too, I begin to fall, evening things through. What am I?" Puzzle 4: "The richer I am, the more I can own. My wealth grows faster than what others have shown. The poorer you are, the smaller your slice. This number I hold shows a nation's device. What am I?" Puzzle 5: "I exist when people cannot meet their needs, no food, no home, no helpful deeds. In the richest or poorest of lands, I show where hunger still expands. What am I?" Puzzle 6: "In a land where the richest thrive, I hold only five parts alive. If the poorest fifth earns just five, and the richest fifth has forty-five, what number might this chart derive?" Puzzle 7: "The more I bend, the more I rise. I show that wealth divides. But if I start to flatten out, a fairer land's within no doubt. What am I?" Puzzle 8: "The rich are richer, the poor are poor, but I show how the difference soars. But when I'm smaller, it's good for you, for it means equality's shining through. What am I?"

The concept of classical dichotomy relates to *

- ☐ distinction between positive and nominal analysis
- ☐ theoretical separation of real and nominal variables
- ☐ distinction between ex-post and ex-ante inflation
- ☐ None of the above

To compare long run economic growth of two economies, which of the following is a suitable indicator?

- ☐ GDP (market prices, national currency)
- ☐ GDP (market prices, dollars)
- ☐ GDP (constant prices, dollars)

SWOC Analysis

Strength

Innovative Teaching Pedagogy
Active Research Culture
Strong Alumni Network

Weakness

Limited Faculty Strength
Inadequate tech and infrastructure

Opportunities

NEP driven Economics Hons. (4-year)
Growth in inter-disciplinary learning
Tech-driven pedagogy

Challenges

Curriculum alignment with varied learning needs
Maintaining rigor while enhancing employability
Bridging access and equity gaps

Roadmap

Student Support:

Focused mentoring for **Economics (Hons)** students
Guidance for Master's entrance and career paths

Faculty Research:

Initiating **research projects** and enhancing publications

Collaborations:

Ties with government, industry, and academic institutions

Thank You!

Grateful for your time

Open to feedback

Suggestions are welcome

Let's grow together
